

HARNESS HANDLES

3 POSITION HEIGHT HANDLE

This handle can be adjusted up or down approximately 3' at one inch intervals. The three height position handle can be ordered on any of the harnesses. I do not recommend this style handle longer than 3" of adjustment. When the handle is in the lowest height position and is folded down, the lower part of the handle stick out past the front of the dog. This could cause problems with the dog's movement with the lower part of the handle sticking out past the dog's chest.

The Suitcase Handle

THE BALANCE HANDLE

This handle is mostly used for problems with equilibrium. The handle provides more space for the user to touch, in order to regain their balance, I do not recommend this handle for support. The handle is also available in the 3 position height model and is available on either the Standard harness or the Support X harness. See the pricing sheet for pricing

This harness and handle is used for special needs children who have special problems holding on to their dogs. The harness and handle style is not recommended for adults as the design can put added weight on the dog's backbone. Please call me if you are in need of this style harness and I will design a harness for your special needs..

The Standard Handle

This handle comes standard on all harnesses unless you order a special handle. It is made to the height listed on the measuring sheet and is not adjustable up or down.
