

# Wheelchair Pulling Harness

The top back strap is padded and covered w/ soft leather. It also has a ½" aluminum support bar that keeps the harness and girth strap in place. A leather padded hand grip is attached to 1" black elastic straps which asorbs the shock when the dog pulls. It also allows the dog to walk straight while pulling the wheelchair.

**This is a harness designed by one of the largest service dog groups in the usa. I was asked to make it in leather and make a few changes to the design. Price ---\$275.00 use the sizing sheet to measure your dog for fit. the handle length is adjustable.**

1 ½" leather chest straps are covered w/ soft leather and padded for comfort and strength.

Note: All straps and buckles are the M2 style that I use on my support harnesses. They are very easy to attach and release.
